

Job Description: LEAD SOLAR INSTALLER/JOURNEYMAN ELECTRICIAN

Currently hiring a Lead Solar PV Installer and a multi-faceted TX State Licensed Journeyman Electrician whose duties would include solar installs.. You must be a mechanically minded individual to work in the field installing residential and light commercial grid-tied photovoltaic (PV) systems. The Lead PV Installer will be responsible for managing and installing the photovoltaic system from beginning to end. In this position, the Lead PV Installer will: coordinate with operations manager, work side by side with other crew members and install all photovoltaic system components, while managing the installation of a fully functional photovoltaic system. The overall goal of the Lead PV Installer is to work with field personnel to achieve completion of the project with the highest level of safety, quality, efficiency and conformance to the original plans and specifications.

Responsibilities (included but not limited to):

Review project plans and drawings and ensure that the project is built according to design.
Work with crew members to complete projects within established policies and procedures
Assemble the solar array racking, properly seal all roof penetrations, and install all relative equipment
Set up solar monitoring system
Maintain high levels of quality assurance and quality control with an emphasis on safety
Diagnose and troubleshoot system malfunctions and operational issues

Communicate with customers in a professional, considerate, and respectful manner, answering all questions and concerns to the best of your ability

Qualifications:

3+ years of previous solar installation experienced required (applicants with no solar and or no extensive electrical experience will not be accepted and or reviewed)
Experience installing both roof and ground mount systems.
Experience with micro and string inverters as well as setting up monitoring systems.
NABCEP Certification preferred
Journeyman Electrician Certification in the State of Texas
General construction knowledge to include: roofing, electrical, and carpentry skills
Experience with electrical work involving up to 600 VDC and 480 VAC
A working knowledge of National Electrical Code (NEC), Uniform Building Code (UBC), local & utility jurisdiction requirements
Experience complying with OSHA safety requirements and regulations
Must have full range of mobility in upper and lower body; ability to work in various positions & environments, including, but not limited to, stooping, standing, bending, sitting, kneeling and squatting for extended periods of time
Ability to lift, pull and push materials and equipment weighing approximately 50 pounds on a frequent basis
Professional appearance and excellent customer service
Hard working attitude
Great attention to detail
Good Attendance
Extremely reliable
Maintain valid Driver's License and clean driving record
Initial background check and drug screening required

Job description - Quality Assurance Specialist (QAS)

The Eco Estates Homes Quality Assurance (QA) team is comprised of industry leading residential PV experts who ensure that as Eco Estates Homes scales and expands to new markets across the country we continue to deliver high-quality, code-compliant, and aesthetically-pleasing solar installations for each Eco Estates Homes customer.

As part of the QA team you will directly impact the quality of thousands of installs. You will collaborate with Eco Estates Homes experts in design, install, and product to set and enforce standards which influence build quality for a significant portion of the US residential PV market.

An Eco Estates Homes **Quality Assurance Specialist (QAS)** is a solar and energy efficiency eco-program (solar attic fans, radiant barrier, insulation, weatherization seal, attic tent, etc...) installation expert who remotely reviews quality and controls costs for a high volume of residential PV installations completed by Eco Estates Homes' Preferred Installer Network (PIN). QAS provides technical leadership by documenting and sharing the most efficient installation practices within Eco Estates Homes' installer network and subcontractors.

They ensure installation quality through remote Quality Assurance Reviews on 100% of Eco Estates Homes installations and through the creation of Installation Best Practice Guides and Technical Updates.

Responsibilities

Quality Control

- Review post-installation photos and documents to verify high-quality, code-compliant, and aesthetically-pleasing solar installations for each Eco Estates Homes customer
- Support Eco Estates Homes Field Managers by helping them communicate with Preferred Installers regarding missing documentation and any open installation quality or safety issues
- Hit daily and monthly volume targets
- Provide an accurate quality review as measured by ensuring a minimum number of customer service cases are created for installer error on projects you review
- Communicate and review with customers on the schedule, quality, start and close out of installation

Cost Control

- Review change orders for Installation Work Orders (IWOs) to ensure the IWO reflects actual equipment and labor costs
- Collaborate with our Accounts Payable and Project Management team to ensure accurate and timely payment to the Preferred Installers
- Share best practices with Eco Estates Homes management in order to help save money via better design, technologies, and processes

Technical Writing

- Document Eco Estates Homes installation best practices by creating photo and diagram based how-to documents and technical updates that are easily understood by our diverse network of partner installers

Desired Skills and Experience

Qualifications

- High school diploma or equivalent required, AA or BA/BS/MA degree preferred
- NABCEP professional installer license preferred
- 2+ years in the solar electric industry, either as a system designer or a PV installer
- Expert understanding of PV systems, including relevant codes (NEC 2008/2011/2014), design, permitting, and installation methods at the local, regional, and national level
- Ability to read and interpret solar building and electrical plans
- Ability to translate complex electrical, roofing, and construction best practices into simple and easy to understand training documents

Key Competencies

- Advanced computer skills, including experience with CRM applications (e.g. Salesforce) and the MS Office software suite, MS Project, MS Visio.
- Proven problem-solving capabilities through identification of deficiencies and execution of solutions

Demonstrates effective leadership skills

- Pragmatic business mind, including well-developed instincts on making a judgment call yourself versus escalating an issue
- Demonstrated excellence with both verbal and written communication to a varied audience, including field personnel and senior management
- Ability to work independently, efficiently and proactively on multiple projects under tight deadlines while maintaining sense of humor and commitment to quality
- A balance of good-natured informality and professionalism
